SimonsVoss not affected by vulnerability in log4j

Dear Sirs,

after the Log4Shell vulnerability in the deprecated Java library Log4j became known, we immediately checked all SimonsVoss systems, components, applications and service providers.

As SimonsVoss, we always put the security of our systems first and, as far as we are currently aware, we are not affected by the vulnerability, as we do not use the affected Java library in <u>any </u>of our systems.

With kind regards

SimonsVoss
